SUMMARY

Senior Full Stack Engineer with a track record of leading engineers and partnering closely with product and design to deliver complex, high-impact features at scale. Experienced driving technical investigations diagnosing system bottlenecks, architecting backend pipelines, and building experimentation frameworks across high-traffic consumer platforms with measurable conversion and reliability outcomes.

TECHNICAL SKILLS

Languages/Frontend: JavaScript, TypeScript, React, HTML/CSS, React Native

Backend/Services: Go, Python, REST APIs, JSON

Web Frameworks: Next.js, Gatsby, Flask

Testing: Jest, Pytest, Cucumber, Selenium, Appium

Platforms/Tools: AWS (Lambda, SQS, S3, DynamoDB), Git, CircleCI, GitLab CI, Contentful, CommerceTools

Experimentation/Observability: Optimizely, Split.io, Datadog, Sentry, Rollbar, k6

Product/Collab: Jira, Confluence, Figma

EXPERIENCE

Peloton Interactive - Senior Software Engineer (Shop Experience / E-commerce)

New York, NY | Feb 2024 - Feb 2026 (*Laid off · Reduction in Force*)

- Launched Tiered Delivery (self-assembly + expert-assembly paths), generating \$0.4M in month-one revenue while reducing customer support friction and surfacing adoption insights for premium products.
- Led backend investigation and implementation to support Peloton's expansion into Australian retail across 11 new partner locations, enabling order attribution and coupon detection for a new market.
- Built an A/B experimentation framework within checkout, enabling product teams to safely test variant experiences without risking conversion-critical flows.
- Delivered Social Teams and Social Challenges features end-to-end — collaborating with product on attribution-aware experiences that improved Guest Pass conversion by 85%.
- Owned Holiday Readiness performance strategy; designed load-testing and observability tooling adopted org-wide, doubling shop throughput (60 → 120 orders/minute) ahead of peak traffic.
- Architected and shipped a full-stack History Summary feature for used-hardware transparency, improving buyer confidence; maintained 95%+ bug-free delivery across all projects through disciplined testing and release practices.

lululemon - Senior Full Stack Engineer (Studio / Cloud Services)

Remote | Apr 2023 - Dec 2023 (*Laid off · Reduction in Force*)

- Built and maintained e-commerce experiences for lululemon Studio, integrating data across multiple commerce and content platforms to support faster product iteration.
- Established automated build and test validation on every merge, improving team release confidence and reducing regressions.
- Designed and shipped an Account Transfers flow, enabling users to transfer subscriptions — a key retention and handoff experience.

Even Financial - Software Engineer (Loans Vertical)

New York, NY | Nov 2021 - Dec 2022 (*Laid off · Reduction in Force*)

- Led frontend development for loan application experiences, refactoring form architecture to support cohort-driven feature flexibility and reduce complexity across a large UI surface.
- Owned A/B experimentation on key loan funnel flows, improving user engagement and application completion rates.
- Expanded smoke test coverage by ~20% and contributed to a greenfield modular form architecture, strengthening release confidence and regression detection.

- Mentored teammates on testing and state management practices; facilitated agile ceremonies and improved ticket documentation to increase execution predictability.

Nomad Health - Technical Lead

New York, NY | Jul 2019 - Oct 2021

- Led full-stack migration from server-rendered templates to a modern client-driven application, improving developer velocity and enabling richer user experiences.
- Drove measurable product improvements: increased profile-ready nurses by 15% through UX and workflow enhancements; improved application-to-submission conversion by 16%.
- Led sprint planning and scrum ceremonies as Technical Lead; broke large migrations into phased milestones and managed cross-team dependencies to keep execution on track.
- Built operational tooling to qualify and route candidates through job submission; contributed to backend services supporting cross-team data querying and reduced legacy technical debt.

Dom & Tom, Inc. - Technical Lead

New York, NY | Aug 2018 - Jul 2019

- Led delivery of web products across multiple clients, coordinating with distributed teams to accelerate execution timelines.
- Built and tested a full-stack admin platform with mobile automation coverage, ensuring quality across web and native surfaces.

Momentive (SurveyMonkey) - Software Engineer

San Mateo, CA | Jan 2015 - Mar 2018

- Developed and maintained a high-traffic service handling ~82,000 requests/minute; designed event-driven processing pipelines and led RESTful API migrations to support platform scalability.
- Managed content asset lifecycle workflows and helped define APIs for new product features, contributing to multi-language platform capabilities.

EDUCATION

Queens College, CUNY - B.S. Computer Science; B.A. Applied Mathematics
